Question - Describe in 2-3 sentences what you expect to achieve from this course.

Ans-

From this course, I expect to achieve different techniques in data mining (e.g. Regression, Classification, Cluster detection, association and anomaly detection etc.) which are used to simplify and summarize the data in a way that we can understand which in turns allows us to detect things about specific cases based on observed patterns. I can also learn to classify a particular case into know pattern based on amount of data we have.
